DIGITAL
Personal Workstation
README.TXT

This README.TXT is intended for the Digital Personal Workstation user. Its purpose is to provide information and any corrections to the user documentation.

ECC MEMORY SUPPORT (Fast-Page DRAM):

Your computer supports both Extended Data Out (EDO) and Fast-Page parity memory. If you use Fast-Page memory with parity, Error Correcting Code (ECC) functionality is supported. Your computer will recognize that a parity bit is available and automatically enables the ECC mode. Fast-Page memory should be installed in pairs of 8MB, 32MB or 64MB. This feature will be supported in BIOS version 1.01.

NETWORK ADAPTER CARD CONNECTOR ON BACKPLANE

Your Systems Reference documentation shows that the cable from the Network Adapter Card goes to "Connector Plug" labeled as "I" in Figure 3-4. This Network Adapter cable should actually go to the "Connector Plug" labeled as "H". "H" located in Figure 3-4 of the System Reference manual is the 10Base-T/10-Base-2 LAN Connector. "I" located in Figure 3-4 of the System Reference manual is the 10/100Base-T LAN Connector.
