         DIGITAL Personal Workstation 266i+/300i+/333i+ README.TXT
                         Created on    03-Nov-1997
                         Last update   31-Mar-1998
```

1) Permedia 2, 3DLabs driver will work only when the SP3 or higher
   is loaded onto the system. This is important when you install
   NT4.0 from CDROM. Otherwise the system will come up VGA even
   though the user loaded the video driver correctly. Be sure to
   always load SP3 before updating the video driver.

2) The Crystal sound driver is set to ensable the PC speaker. To
   disable the PC speaker follow the links to

"\start\programs\accessories\multimedia\volume control\options\advanced"

   and insure that the mute box is checked. The PC speaker will now be
   disabled.

** Plugging in headphones or speakers into the workstation will NOT
disable the PC Speaker **

3) Drivers for Permedia P2 Video, Crystal audio and 21143 network
   from the NT4.0 CDROM will produce undesirable effects on the
   DIGITAL PWS.   These on board devices should be loaded with the
   drivers supplied by Digital on the System Software CD. For the
   latest drivers please visit us on the web at :

                www.workstation.digital.com

4) The AMI diagnostics do not currently support Crystal sound on this
   workstation. When the new version is available copies will be
   distributed.

5) The DIGITAL PowerStorm 4D30T graphics module must be installed in
   primary PCI slots (top two PCI slots).

6) The 333MHz Pentium II requires a minimum BIOS revision of V1.03 on
   DPWSi+ series workstation.
